

The [Math Seminar](#) presents

Michael Hrenko

Did anyone ever ask you what you are going to do with a Math degree?

Have you ever thought about becoming an actuary? After passing the first two actuarial exams and completing an internship in summer 2011 with an actuarial consulting company, I want to share the feedback I gained to questions like...

- *What do actuaries do on a daily basis?*
- *How do you become a qualified actuary?*
- *Are the exams hard?*
- *How do you pass them?*
- *What industries do actuaries work in?*
- *Income?*
- *Will I be eternally confined to a cubicle as a spreadsheet monkey?*

***Michael Hrenko** is anticipated to graduate from Baldwin-Wallace in December, 2011 with a B.S. in Mathematical Economics. During the previous 2011 summer, he completed an internship with an actuarial consulting company. He has achieved passing scores on actuarial exams P (Probability) and FM (Financial Math).*

Friday September 9, 2011, 12:10-12:55pm, MACS 146

Brown bags are welcome!

The B-W Math Seminar sponsors presentations by students, faculty, and outside guests, for all B-W students interested in the mathematical sciences.
